## **Building One Family at a Time**

At Duke Fertility Center, experts who are fellowship-trained, board certified, and active in setting the national standards for fertility care help patients build their families. As part of the Duke University School of Medicine, physicians train and certify the next generation of elite fertility specialists and are on the forefront of the latest advances in fertility.

For more than 25 years, Duke Fertility Center has been a nationwide leader in fertility services, offering unparalleled expertise and support to tens of thousands of families. Our approach has been to combine compassionate, thoughtful care with the latest state-of-the-art techniques and breakthroughs available.

Duke Fertility Center offers the full range of infertility treatment options, from lifestyle changes and fertility medication, to artificial insemination and screening of gestational carriers. Providers work with heterosexual couples and LGBTQ+ couples, as well as single men and women who are trying to conceive. The entire team is here to partner with patients during this process and help them reach their goal to grow their family.

---

# Treatments

## Treatment for All Medical Conditions Related to Infertility

For patients with fibroids, endometriosis, or polycystic ovary syndrome, Duke Fertility Center's reproductive endocrinologists will recommend the appropriate treatment to decrease pain and improve fertility. They can also help patients experience relief if they have troublesome symptoms during the hormonal transition to menopause.

## Fertility Preservation

Individuals and couples may choose to freeze their embryos, eggs, or sperm in order to attempt pregnancy at a later date.

## Comprehensive Stress Reduction Program

Fertility diagnosis and treatment are often emotionally draining. To address this stress, an onsite clinical psychologist provides individual and couples therapy, as well as monthly support groups to decrease the sense of isolation. Decision making consultations are available for those in need of support when considering multiple pathways or if a patient and their partner are not yet in agreement about next treatment steps.

## Onco-Fertility Services

The Duke Onco-Fertility Program helps to facilitate rapid referral to fertility preservation services for cancer patients of reproductive age treated at the Duke Cancer Institute or Duke Children's Hospital and Health Center.

For emergent consults, patients will be seen within 24-48 hours. The Onco-Fertility Program has a designated patient navigator who provides patient education, assists with placing referrals/ensuring appropriate follow-up and navigating patients through the process. Resources to assist patients with reducing the financial burden of fertility preservation are also available.

Watch a video about the Onco-Fertility Program (approximately 5 minutes).

## LGBTQ+ Fertility Options

Starting a family is a big step in patients' lives, and Duke Fertility Center's team of fertility experts can support patients before, during, and after a pregnancy. Options are provided to create a personalized plan toward parenthood and are inclusive of individual needs, whether patients are seeking a family as a couple or individual. Reproductive endocrinologists, fertility specialists, and OBGYN providers focus on fertility treatments that are right for each unique patient. A clinical psychologist is available for emotional and social support as patients build their family.

## Third Party Reproduction

For people seeking a donor, our specialists will work with them according to their preferences for an anonymous or directed donation — whether they prefer to receive eggs or sperm from someone they don't know, or have identified a donor who will be a part of their family planning.

Through Duke Fertility Center's donor egg program, individuals or couples who need a donor egg because of age or other factors can arrange to have a friend or relative be their egg donor, or apply to be matched with someone from the local area who has volunteered to be an anonymous egg donor.

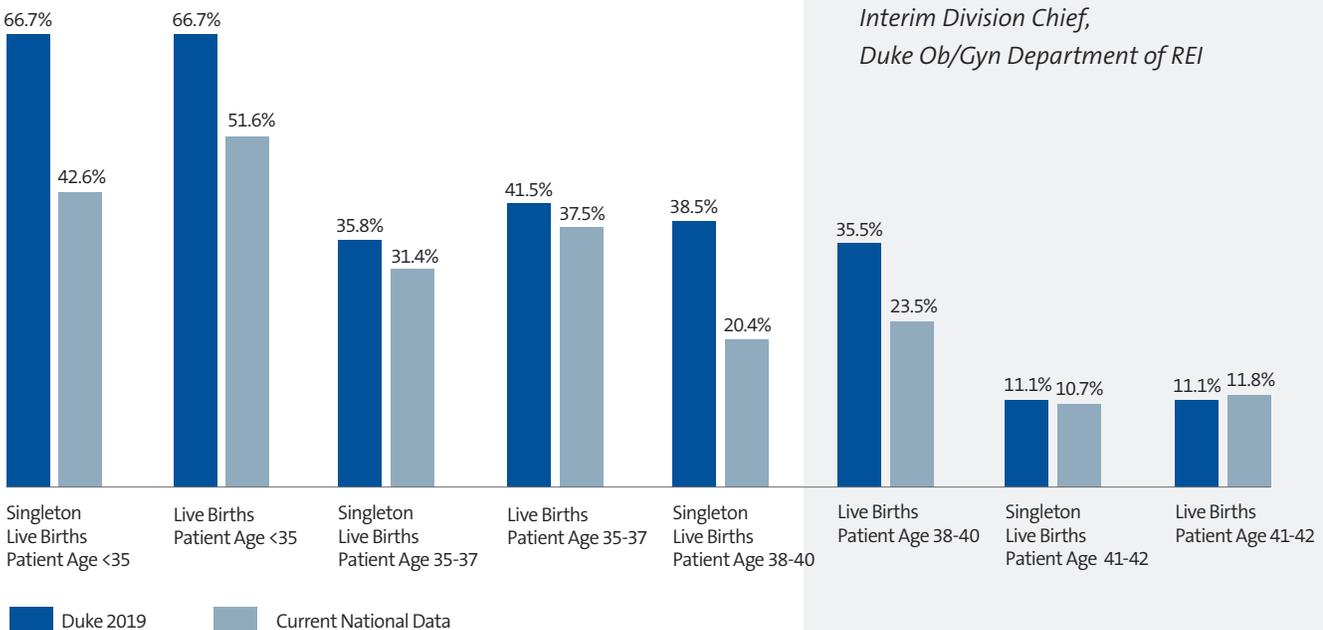

For people who want to work with a gestational carrier who delivers a child for them, Duke Fertility Center will assist with the medical and psychological screening process to verify if a gestational carrier is appropriate and well-prepared for this experience. Assistance is available to help with contacting local legal resources to handle all the appropriate legal arrangements.

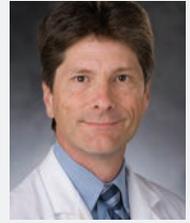

## The Duke Difference

- Board certified, nationally recognized fertility specialists
- Pregnancy rates above national average
- Personalized treatment plans
- Comprehensive stress reduction program
- Customized treatment financing plans, drug payment plans and a refund guarantee option

## Duke IVF Success Rates 2019

## Dear Colleague,

We are pleased to announce the relocation of Duke Fertility Center into our new, state-of-the-art facility that offers the most advanced care in reproductive endocrinology and infertility. Duke Fertility Center's success rates continually exceed national IVF success rates.

At Duke Fertility Center, patient care is provided by physicians who are active in setting the national standards for fertility care.

When patients come to Duke Fertility Center, they will develop a personal relationship with physicians who will work with them to direct their care. In addition to their primary fertility physician, Duke Fertility Center has put together an integrated team of nurses, psychologists, embryologists and support staff who work together to address all of patients' physical, emotional and financial concerns.

Our team looks forward to supporting, assisting and caring for your patients and making their dreams of building their families come true.
